

# MudStopper

Trackout Control Solution for Construction Site Entrances – also known as FODS

SKU: GG-MS-001

## PROTEGMA

Commercial Partner GroundGuards®

### DESCRIPTION

MudStopper – also widely known in the industry as FODS (Forward Operating Defence System) – solves the critical problem of mud and sediment being tracked from construction sites onto public roads. The HMWPE pyramids deform the tyre, spread the tread lugs and deposit dirt onto the mat. No excavation or ground preparation required – install directly on existing soil. 15 times more abrasion-resistant than steel. 100% recyclable and reusable for years.

### KEY FEATURES

- Instant construction entrance on virtually any surface
- Will not clog or become embedded in soft ground
- Superior to rocks, shakers and steel plates
- Supports 80+ tonnes (proven 113t per mat)
- 15x more abrasion-resistant than steel
- 100% recyclable; made in USA; no excavation required

### TECHNICAL SPECIFICATIONS

|                |                                            |                     |                                         |
|----------------|--------------------------------------------|---------------------|-----------------------------------------|
| Dimensions     | 3658mm x 2134mm                            | Load Capacity       | 80t+ (proven 113t/mat)                  |
| Pyramid Height | 76 mm                                      | Abrasion Resistance | 15x more resistant than steel           |
| Weight         | 195 kg                                     | Anchoring           | Soil rods; min. 2 anchors per mat       |
| Material       | HMWPE (High Molecular Weight Polyethylene) | Alternative Name    | FODS – Forward Operating Defence System |
| Colour         | MudStopper Yellow                          |                     |                                         |

### SECTORS

Construction, Airports, Government, Military, Agriculture, Forestry, Oil & Gas, Energy, Telecommunications, Mining

### IDEAL APPLICATIONS

Stabilised construction entrances, trackout control at exits, forestry access roads
